

DRUM TYPES

**BUBBA'S
BARRELS**
BARRELS, KETTLES, & BREWING HARDWARE

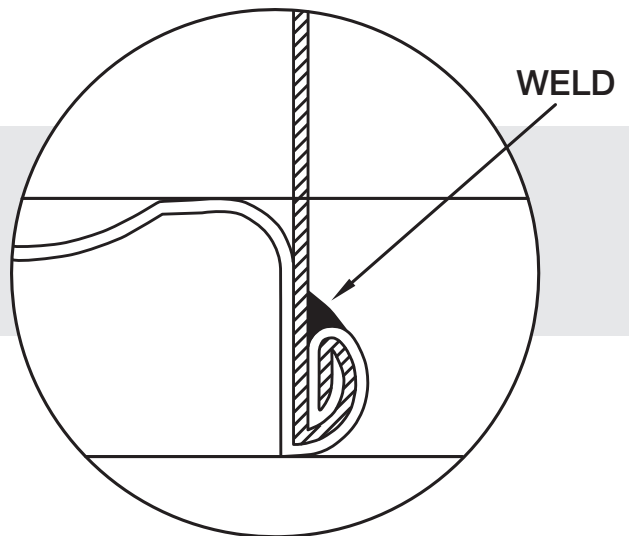

Standard Crimped drums make up 90+% of all drums made. They are less expensive and do their designed task well. They do not handle heat well. The expansion and contraction causes the seaming compound to leak prematurely. When shopping for drums, unless specifically stated otherwise, it's safe to assume the drum is of this type.

Bubba's Barrels does not use this type of drum for building kettles.

Standard Crimped Drum

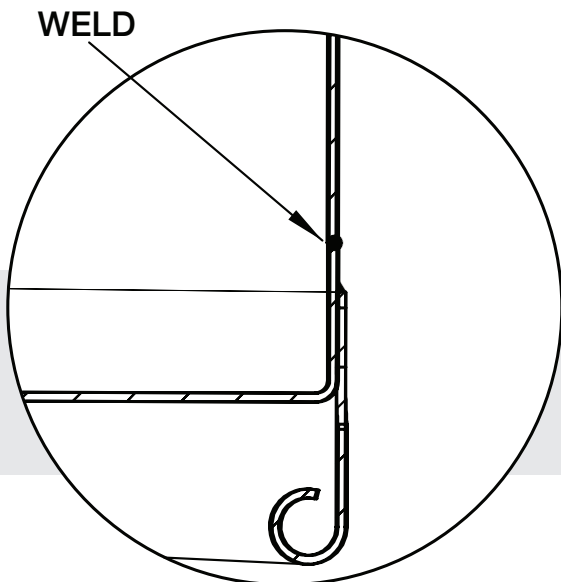

SEAMING
COMPOUND

All Welded or Welded Chime Drums are an excellent choice for applications involving heat. Most of our larger drums are of this type. They make great kettles.

WELD

Sanitary Seamless Drum

Sanitary or Seamless Drums are the best drums made. Resembling a stock pot on the inside, they have no crevices, which makes them very easy to clean. They make excellent kettles.
